

INTELLIGENT DOOR PLATE AND CHIME

ABSTRACT OF THE DISCLOSURE

5 A system in operable communication with a doorbell chime for audio
annunciation of a visitor to an occupant of a room in a multiple room building, the system
configured to indicate a status of the room to the visitor or occupant, the system
comprising: a switch assembly configured to convey a message outside of the room; the
switch assembly operable from inside the room; an indicating assembly in operable
10 communication with the switch assembly, the indicating assembly configured to indicate
the message when the message is selected, the message viewable from inside and outside
of the room; and a doorbell button in operable communication with the doorbell chime,
the doorbell button operably connected with the indicating assembly and operable from
outside of the room by the visitor.
